

Canadian UAVs Officially Opens Its Lockheed Martin Distribution and Service Centre

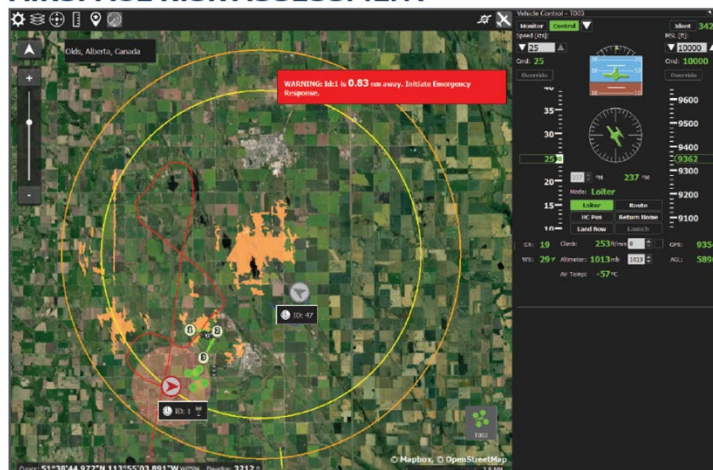

CALGARY, Alberta, Nov. 1st, 2022 – Canadian UAVs is pleased to announce the completion of its Lockheed Martin Distribution and Service Centre based in Calgary, Alberta. The 1,500 square foot locally focussed office space boasts local Visual Line of Sight (VLOS) and Beyond Visual Line of Sight (BVLOS) training locations as well as order fulfillment and servicing infrastructure to ensure on-time and well supported service offerings for the Department of National Defence and other government agencies, such as law enforcement, search and rescue, wildfire control and environmental agencies.

Additionally, Canadian UAVs original distribution agreement has been expanded to include the latest generation of the Indago quadrotor system, Indago 4. Indago 4 can be paired with Canadian UAVs' proven Detect and Avoid (DAA) system, the Sparrowhawk™ radar, to give operators BVLOS capabilities in civil airspace. Indago 4 employs the Lockheed Martin VCSi ground control interface, which allows operators to see Sparrowhawk's airspace management picture that organically displays the vehicle control interface.

AIRSPACE RISK ASSESSMENT

Sparrowhawk integrates directly into a UAS ground control station (GCS) to provide a holistic airspace picture to the mission operator, identifying impending air risk in an effective manner to allow for rapid airspace deconfliction.

Sparrowhawk software detects and assesses airspace encounters to ensure an appropriate risk mitigation with high reliability.

"We are excited to have Canadian UAVs as a key partner to Lockheed Martin Procerus Technologies. Their expertise in uncrewed aircraft systems (UAS) along with their innovative approach to BVLOS operations will help reinforce Lockheed Martin's support to the Canadian Armed Forces and their operations utilizing UAS," said Jeff Gardner, Business Development Manager at Lockheed Martin Procerus Technologies.

"By establishing this distribution centre in Canada, Canadian UAVs provides a one-stop shop service to our customers, ensuring they have in-country support to focus on their very demanding missions," said Sean Greenwood, president and founder of Canadian UAVs.

"We deal with configuration management, shipping logistics, type training and keep an inventory of consumables to ensure rapid turnaround times. After years of using Lockheed Martin's UAVs in the oil and gas sector, we have an intimate understanding of how to deploy these systems in some of the harshest locations on earth."

"If the customer wants to execute more advanced missions, we have the only technology in the market with proven data and regulatory permitting to enable long distance, wide area BVLOS operations in Canada. With Canadian UAVs and Lockheed Martin, you are buying a capability, not just a drone."

About Canadian UAVs

Canadian UAVs is a leading provider of UAS services including training, managed services, and consultancy; and a Lockheed Martin small UAS distributor in Canada. The company's base philosophy is to ensure that projects are conducted with the highest possible aviation standards.

Canadian UAVs has a dual market focus, working with both commercial consumers of geospatial data, as well as military users of UAS. Our mission of providing the ecosystem for the integration of UAVs into complex airspace means bringing our technology, safety-first aviation standards, and training expertise to both markets thus enabling a cross-pollination of best practices and experiences for our customers.

About Lockheed Martin

Headquartered in Bethesda, Maryland, Lockheed Martin (NYSE: LMT) is a global security and aerospace company that employs approximately 114,000 people worldwide and is principally

engaged in the research, design, development, manufacture, integration and sustainment of advanced technology systems, products and services.
